

TPL-9 Turbo-Meters

2 Inch and 3 Inch Turbo-Meters

M-1080
Rev. 7

 **SENSUS**
METERING SYSTEMS

Continued research in gas turbine meter technology has resulted in the development of Sensus Metering Systems; TPL-9 Turbo-Meters with either 2" or 3" flanged connections. These light-weight, compact and accurate gas turbine meters have been field proven on literally thousands of production, trans-mission, distribution and industrial applications.

500' Bell Prover

Largest of its kind in the world. flow rates to 120 MCFH air. Calibrated by National Bureau of standards recommended procedures and referable to a standard cubic foot as defined by the Bureau.

High-Pressure Test Loop

This closed circuit test loop, powered by a 250 HP compressor, is the largest of its type in the world. Operating over a pressure range of 25 to 1000 psig, it can pass the equivalent of more than 4½ million CFH of 0.6 Sp. Gr. gas. This unique facility is used to study the performance characteristics of Turbo-Meters under varying pressure and flow rates.

DESIGN FEATURES

Capacity—Sensus Metering Systems TPL-9 Turbo-Meters have a nominal capacity rating at 4 ounces (2 kPa) inlet pressure of 9000 SCFH (216 MDCFD), or, in metric, 255 Sm³/h (6100Sm³/day). At elevated inlet pressures, the meter maximum capacities increase directly with the Boyle's Law Pressure Multiplier Factor.

Pressure Rating—TPL-9 Turbo-Meter bodies and flanges are constructed of steel conforming to ANSI specifications for 150, 300 and 600 pressure ratings (275 lbs., 720 lbs., 1440 lbs.) (1800, 4800, 9600 kPa).

Modular Design—One common module, incorporating all mating parts, is used for either 2" or 3" TPL-9 turbo-Meters regardless of the meter pressure rating. This modular design minimizes field down-time and simplifies parts inventory. Replacement calibrated modules are available as needed.

Lubricant Bearings—External fittings are supplied as a construction standard for lubrication of the stainless steel rotor shaft bearings under operating conditions.

Rangeability—The ratio of the maximum meter capacity to the minimum flow rate which can be measured within +/- 1% accuracy at a constant inlet pressure is 10:1 at low pressure. The meter range increases significantly at elevated pressures as shown in the performance data.

Uninterrupted Flow—Meter failure cannot interrupt flow nor can meter operation cause a pressure pulsation in the line.

Installation—The 90° elbow configuration of the meter body permits compact installations with the meter inlet in either the horizontal or vertical plane.

Readout—The meter index plate is drilled to accept direct mounting of any standard mechanical readout device including indexes, chart recording or integrating gauges.

Pulse Outputs—As a construction standard, TPL-9 Turbo-Meters incorporate a switch closure to provide a pulse output per 10 or 100 cubic feet of gas at line conditions. For metric meters, the pulse output values are 0.1 m³ or 1.0m³. TPL-9 Turbo-Meters with a slot sensor pulser are available for higher frequency pulse outputs.

Industry Standard—Sensus Metering Systems' TPL-9 Turbo-Meters conform to the Recommendations Covering Use of Axial-Flow-Type Turbine Meters in Measurement of Fuel Gas published as American Gas Association Report No. 7.
