2" Large Single Port

2" Large Single Port Flangeless Flowgrid® Valve with Series 20 Pilot

SECTIONAL VIEW

OVERPRESSURE PROTECTION

The Flowgrid® Valve is bi-directional and has a full ANSI rating on both the inlet and outlet. Overpressure protection is required only if the pressure can exceed the flange or body rating.

The pilots, like most regulators, may have an outlet pressure rating lower than the inlet pressure rating. If this is the case then some external form of overpressure protection must be provided for the pilot.

Anytime the Flowgrid® valve or pilot system is exposed to pressure in excess of its rating it should be inspected for damage.

The 2" Large Single Port Flangeless Flowgrid® valve is simply a higher capacity version of the original 2" Single Port Valve. The space saving face-to-face dimension (4.187') is the same as the obsolete Model 82 and current Model 83 making the Flowgrid® valve an ideal replacement which offers in-line maintenance, Large Single Port and the Standard Port valves share the same Body, O-ring, Body Seal, and Main Spring. The Spring Case, diaphragm, Spacer and Throttle Plate are unique to this construction.
